

MoneyPal Genesis Layer Buildathon

Developer Brief

Building the MoneyPal Genesis Intelligence Console

Client: MoneyPal Digital Services Pvt. Ltd.

Institution: GICC (GICCLtd.com)

Technology Partner: Aroha Technologies

Duration: 24 Hours

Participants: 7 Engineers (Aroha Technologies)

Selection: 4 Engineers will be selected to join the MoneyPal Genesis Layer development team.

1. Purpose

The MoneyPal Genesis Layer is responsible for onboarding financial institutions onto the MoneyPal platform by transforming legacy information into structured institutional intelligence and, in later phases, migrating operational data into the NEST platform.

This Buildathon is **not** a coding competition.

It is an opportunity to demonstrate product thinking, software architecture, AI engineering and user experience.

At the end of the Buildathon, the team should have built a working **Genesis Intelligence Console** that becomes the foundation for the production Genesis Layer.

The Buildathon will begin with the **Aroha Corporate Intelligence Framework** and its Retrieval-Augmented Generation (RAG) tools. Teams are expected to use these capabilities to ingest, organize, summarize and present intelligence rather than manually curate information.

2. Application

Build a web-based **MoneyPal Genesis Intelligence Console** by extending the existing **Aroha Corporate Intelligence Web Console**.

The application shall prominently display:

- **MoneyPal** logo
- **GICC** logo (GICCLtd.com)

The interface should present the Genesis Layer as a joint onboarding environment for MoneyPal and GICC.

3. Users

The application shall support four user roles.

MoneyPal Administrator

- Platform administration
- Client onboarding
- Intelligence management

GICC Administrator

- Institution administration
- Dashboard
- Intelligence review

GICC Policy Maker

- Competitive analysis
- Policy formulation
- Regulatory review

GICC Director

- Executive dashboard
 - Strategic insights
 - AI briefings
-

4. Dashboard

The landing page should answer one question:

"What should the GICC leadership know today?"

Suggested widgets:

- Economic Snapshot
 - Karnataka Lending Landscape
 - Regulatory Alerts
 - AI Executive Brief
 - Recently Updated Intelligence
 - Action Items
-

5. Buildathon Modules

The seven engineers should organize into three teams (approximately two developers per module, with one developer supporting integration and UI consistency).

Module 1 — Macro-economic Intelligence

Objective

Provide business context for MSME lending in Karnataka.

Suggested information includes:

- Indian Economic Survey
- MSME trends
- GDP growth
- Inflation
- Employment
- Credit growth
- Karnataka economy
- Manufacturing
- Agriculture
- Services
- Financial inclusion
- Government initiatives

The objective is to create an executive briefing rather than a data warehouse.

Module 2 — Competitive Intelligence

This module should provide an executive understanding of the competitive lending landscape.

Initial focus:

Karnataka.

Suggested institutions include:

- Karnataka State Financial Corporation
- Karnataka State Co-operative Apex Bank
- Kinara Capital
- National Co-operative Bank
- Belagavi District Central Co-operative Bank
- Belgaum Industrial Co-operative Bank
- Kauljalgi Urban Co-operative Bank
- Bellary Urban Co-operative Bank
- Bhatkal Urban Co-operative Bank
- South Canara District Central Co-operative Bank
- SIDBI (MSME ecosystem benchmark)

For each institution provide:

- Institution profile
- Products
- MSME focus
- Public financial highlights
- Geographic presence
- AI-generated SWOT
- Strategic observations
- Links to source documents

The architecture should allow institutions to be added without software changes.

Module 3 — Regulatory Intelligence

Provide an executive view of RBI regulations applicable to NBFCs with assets below ₹500 crore.

Suggested categories:

- Master Directions
- Prudential Norms
- Fair Practices Code
- KYC / AML
- Digital Lending
- Outsourcing
- Governance
- Information Security
- Circulars

- Notifications

For each regulation provide:

- Executive Summary
 - Applicability
 - Business Impact
 - Compliance Actions
 - Effective Date
 - Source Reference
-

6. AI Expectations

The solution shall use the **Aroha Corporate Intelligence RAG Framework** to:

- Ingest documents
- Index content
- Perform semantic search
- Generate executive summaries
- Compare competitors
- Produce AI briefings
- Link every summary back to its source

The application should demonstrate explainable AI rather than chatbot-style responses.

7. Technology

Teams may choose their preferred technology stack.

The focus is on:

- Modular architecture
- Clean APIs
- Responsive UI
- Extensible design
- Maintainable code

Authentication may be implemented using demonstration credentials.

8. Evaluation

Selection of engineers will be based on:

Area	Weight
Software Architecture	30%
Product Thinking	20%
User Experience	20%
AI Integration	15%
Engineering Quality	15%

We are looking for engineers who can build production platforms—not simply hackathon prototypes.

9. What Happens Next

Following the Buildathon, the selected team will extend the Genesis Layer to include:

- Prosper migration
- Tally migration
- Canonical Business Objects
- NEST Aggregate Block creation
- Business Intelligence
- Regulatory Information Model (RIM)
- DNBS reporting
- Institutional onboarding workflows

The Buildathon Console will therefore evolve directly into the production Genesis Platform.

Appendix A — Approved Information Sources

Developers shall use the **Aroha Corporate Intelligence Framework** to ingest, index and summarize information from the following sources.

Module 1 — Macro-economic Intelligence

- Government of India Economic Survey
<https://www.indiabudget.gov.in/economicsurvey/>
 - EPWRF India Time Series / Economic Database
<https://epwrfits.in/>
 - Ministry of Statistics and Programme Implementation (MOSPI)
<https://www.mospi.gov.in/>
 - Indian Economy presentation (DocSend reference provided)
<https://docsend.com/view/8ygfx6p36qmhpnui>
-

Module 2 — Competitive Intelligence

Official websites and public disclosures of:

- Karnataka State Financial Corporation
- Karnataka State Co-operative Apex Bank
- Kinara Capital
- National Co-operative Bank
- Belagavi District Central Co-operative Bank
- Belgaum Industrial Co-operative Bank
- Kauljalgi Urban Co-operative Bank
- Bellary Urban Co-operative Bank
- Bhatkal Urban Co-operative Bank
- South Canara District Central Co-operative Bank
<https://scdcc.bank.in/>
- SIDBI
<https://www.sidbi.in/en/>

Additional public sources:

- Annual Reports
 - Credit Rating Reports
 - Investor Presentations
 - News Articles
 - Public Financial Statements
-

Module 3 — Regulatory Intelligence

Primary source:

Reserve Bank of India – Master Directions

https://rbi.org.in/scripts/BS_ViewMasterDirections.aspx?did=411

Additional RBI resources:

- Circulars
 - Notifications
 - Press Releases
 - FAQs
 - Speeches
 - Annual Reports
 - Financial Stability Reports
-

AI Principles

Every AI-generated insight shall:

- Cite its originating document.
- Link users back to the original source.
- Distinguish factual information from AI interpretation.
- Present concise executive summaries suitable for directors, policy makers and administrators.

The objective is to demonstrate how the Aroha Corporate Intelligence Framework can become the intelligence foundation of the Moneypal Genesis Layer, enabling institutions such as GICC to onboard faster, make better strategic decisions and prepare for migration to the Moneypal NEST platform.
