

MoneyPal Genesis Intelligence Layer

Sprint 1 Briefing

July 14 – August 3, 2026

Sprint Theme

From Data to Intelligence

Why are we building this?

Every lender today has data.

Very few have intelligence.

Core systems such as Loan Origination Systems (LOS), Loan Management Systems (LMS) and Accounting Systems record transactions extremely well. They answer questions like:

- Who borrowed?
- How much was disbursed?
- Was repayment received?
- What is the ledger balance?

They do **not** answer the questions management asks every morning.

- Is the business becoming stronger?
- Are our investments creating value?
- What would our regulator worry about if they walked in today?

The Genesis Intelligence Layer sits **above** operational systems and continuously answers these questions.

This sprint is the first step towards building that capability.

Scope

This sprint focuses on **one institution type only**.

Institution

Lender

The architecture should be generic enough to support two other types of clients MoneyPal would have - Banks and Marketplace Operators. This can be covered in future sprints, but Sprint 1 delivers intelligence only for Lenders (specifically GICC, Ltd).

Data Sources

The team will work with two systems.

Prosper

Loan Origination System / Loan Management System

Source:

Oracle Data Dump

Snapshot Date:

30 June 2026

Contains:

- Customers
 - Loans
 - Repayments
 - Collections
 - Loan lifecycle
 - Portfolio information
-

Tally ERP

General Ledger

Contains:

- Chart of Accounts
- Trial Balance
- Journal Entries
- Profit & Loss
- Balance Sheet
- Financial transactions

Genesis is **not** another transaction system.

Genesis reads operational data and converts it into management intelligence.

The Three Personas that Genesis Intelligence is being built for

Every screen, report and dashboard should answer a real person's question.

Business

Question:

"How is my business doing?"

Business users care about:

Portfolio growth - Where is the growth coming from? What's holding us back or slowing down?

Disbursements - Who did well? Are we becoming efficient?

Collections - Who did well? Who did not? Are we becoming efficient?

Customer growth - Where is this coming from? What are customers saying about us?

Product performance - Which is doing well? Which is pulling us back?

Branch performance -

Portfolio quality

Early warning indicators - Defaults, missed repayments and possibility of this signalling that others with similar characteristics might default

Business trends

What are my competitors saying?

What are others saying about me and my competitors? Note: Articles comparing the client's organization with others is especially important

Finance

Question:

"How are our investments doing?"

Finance users care about:

Financial metrics (ROI for various portfolios)

Governance, Risk & Compliance (GRC)

Question:

"What does the regulator think about us?"

GRC users care about:

What reports/data submissions are due to which regulator and "Generate as-on date/projected return for X date" or "Give me the filed return from X date"

Regulatory ratios

Portfolio concentration

Overdue accounts

Provisioning

Internal controls

Policy breaches

Risk indicators

Audit readiness

Compliance status

The GRC dashboard should feel like a regulator looking over the institution's shoulder.

Sprint Deliverables

Three Intelligence Modules.

Module 1

Economic Intelligence

Purpose

Understand the health of the lending business.

Typical questions

Is lending growing?

Where are we growing?

Which products perform best?

What is happening to collections?

Where is risk increasing?

Expected output

Business Dashboard

Portfolio Dashboard

Growth Dashboard

Collections Dashboard

Module 2

Competitive Intelligence

Purpose

Understand institutional performance.

This is **not competitor benchmarking** in Sprint 1.

Instead,

compare the institution against itself.

Examples

Current month vs previous month

Current quarter vs previous quarter

Current year vs previous year

Branch comparisons

Product comparisons

Officer comparisons

Expected output

Trend analysis

Variance reports

Performance rankings

Module 3

Regulatory Intelligence

Purpose

Generate DNBS report as on 30-06-2026 (Important Note: While the other modules can be carried forward into the next sprint, the delivery of this is not).

What the Developers Should Remember

You are **not building reports**.

You are building answers.

Every chart must answer one management question.

Every screen must reduce decision-making time.

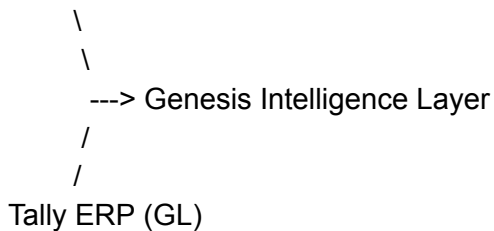

Every number should lead naturally to the next question.

Think less like database developers.

Think more like executive advisors.

Technical Architecture

Prosper (LOS/LMS)

Business Intelligence

Finance Intelligence

Regulatory Intelligence

Genesis does not modify source systems.

It continuously interprets them.

Definition of Done

By the end of Sprint 1,

a lender should be able to log into Genesis and immediately answer:

Business

"How is my business doing?"

Finance

"How are our investments doing?"

GRC

"If the regulator visited today, what would concern them?"

If Genesis answers these three questions clearly, Sprint 1 has succeeded.

Out of Scope

The following are **not** part of Sprint 1.

- Banks
- Marketplace Operators
- AI-generated recommendations
- Predictive analytics
- Industry benchmarking
- Credit bureau integration
- RBI reporting automation
- Workflow automation
- Mobile applications

These will be considered in future sprints.

Sprint Success

Success is **not** measured by the number of dashboards built.

Success is measured by whether a CEO, CFO and Compliance Officer can each spend five minutes with Genesis and leave with a better understanding of their institution than they had before opening it.

The objective of Sprint 1 is simple:

Transform operational data into management intelligence.

Everything else builds on that foundation.
